liquid wikipedia Jul 27 2019
web liquid is one of the four
primary states of matter with
the others being solid gas and
plasma a liquid is a fluid unlike
a solid the molecules in a liquid
have a much greater freedom

to move the forces that bind
the molecules together in a
solid are only temporary in a
liquid allowing a liquid to flow
while a solid remains rigid
electrical resistivity and
conductivity wikipedia Dec 12
2020 web electrical resistivity
also called specific electrical
resistance or volume resistivity
is a fundamental property of a
material that measures how
strongly it resists electric
current a low resistivity
indicates a material that
readily allows electric current
resistivity is commonly
represented by the greek letter
 ρ the si unit of electrical
resistivity is the ohm meter
sun wikipedia Nov 10 2020 web
the sun is composed primarily

of the chemical elements hydrogen and helium at this time in the sun's life they account for 74.9 and 23.8 respectively of the mass of the sun in the photosphere all heavier elements called metals in astronomy account for less than 2% of the mass with oxygen roughly 1% of the sun's mass carbon 0.3%, neon 0.2% and

elements, compounds and mixtures [purdue university](#) May 29, 2022 web elements any substance that contains only one kind of an atom is known as an element because atoms cannot be created or destroyed in a chemical reaction elements such as phosphorus (P) and sulfur (S) cannot be broken down into simpler substances

by these reactions example water decomposes into a mixture of hydrogen and oxygen
