Parenting Matters May 05 2020 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus

to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. *Parenting Matters* identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Out of the Cave Sep 28 2019 Do you feel guilt and shame about negative thoughts and emotions and your inability to overcome them? Bestselling author and pastor Chris Hodges helps those struggling with depression find liberating solutions by drawing from the life of the prophet Elijah. You might be asking, Should a Christian even be having these struggles? Depression is the number one health issue in the world today, yet those who suffer are still sometimes stigmatized—especially followers of Jesus. Many assume God's peace, power, and protection should prevent us from ever feeling anxious, depressed, and

afraid. But the Bible teaches otherwise, particularly in its depiction of the life of the Old Testament prophet Elijah. In *Out of the Cave*, Chris Hodges uses Elijah's life to show us that everyone is susceptible to depression. Even when we're walking closely with God, we can still stumble and get lost in the wilderness of tangled emotions. But we don't have to stay there, because we serve a God who meets us in the darkness. *Out of the Cave* helps us remove the stigma of depression and realize we're not alone; understand the ways our temperament and view of God affect the way we handle depression; and learn a comprehensive approach to wellness—mind, body, and soul—from Elijah's journey. With his trademark blend of Bible-based wisdom, practical application, and vulnerability in sharing his personal struggles, Hodges explores the causes of depression we can't change, the contributors we can conquer, and offers transformative hope and spiritual power to help us win the battle.

Solutions Aug 27 2019 Mass incarceration. In recent years it's become clear that the size of America's prison population is unsustainable -- and isn't needed to protect public safety. In this remarkable bipartisan collaboration, the country's most prominent public figures and experts join together to propose ideas for change. In these original essays, many authors speak out for the first time on the issue. The vast majority agree that reducing our incarcerated population is a priority. Marking a clear political shift on crime and punishment in America, these sentiments are a far cry from politicians racing to be the most punitive in the 1980s and 1990s. Mass incarceration threatens American democracy. Hiding in plain sight, it drives economic inequality, racial injustice, and poverty. How do we achieve change? From using federal funding to bolster police best practices to allowing for the release of low-level offenders while they wait for trial, from eliminating prison for low-level drug crimes to increasing drug and mental health treatment, the ideas in this book pave a way forward. Solutions promises to further the intellectual and political momentum to reform our justice system.

The Two Percent Solution Aug 08 2020 Suppose someone told you that for just two cents on the national dollar we could have a country where everyone had health insurance, full-time workers earned a living wage, poor children had great teachers in fixed-up schools, and politicians no longer had to grovel to wealthy donors. And suppose that when we were done, government would still be smaller than it was when Ronald Reagan was president. If you're like most people, you'd probably think that for two cents on the dollar this sounds like an intriguing deal. But 2 percent of America's GDP is more than 200 billion a year--way beyond what politicians in Washington think is possible. Between our proper intuition that 2 percent is a small amount, and the Washington consensus that a 2 percent shift in priorities is beyond imagining, lies the opportunity to transform American politics. In this agenda-setting book, Matthew Miller challenges our country (and those who would lead it) to change the way we think about our public responsibilities before the baby boomers' retirement siphons all the money out of the system. The Two Percent Solution is a call to arms that no serious candidate, Republican or Democrat, can afford to ignore.

The Kill Chain Jun 17 2021 From a former senior advisor to Senator John McCain comes an urgent wake-up call about how new technologies are threatening America's military might. For generations of Americans, our country has been the world's dominant military power. How the US military fights, and the systems and weapons that it fights with, have been uncontested. That old reality, however, is rapidly deteriorating. America's traditional sources of power are eroding amid the emergence of new technologies and the growing military threat posed by rivals such as China. America is at grave risk of losing a future war. As Christian Brose reveals in this urgent wake-up call, the future will be defined by artificial intelligence, autonomous systems, and other emerging technologies that are revolutionizing global industries and are now poised to overturn the model of American defense. This fascinating, if

disturbing, book confronts the existential risks on the horizon, charting a way for America's military to adapt and succeed with new thinking as well as new technology. America must build a battle network of systems that enables people to rapidly understand threats, make decisions, and take military actions, the process known as "the kill chain." Examining threats from China, Russia, and elsewhere, *The Kill Chain* offers hope and, ultimately, insights on how America can apply advanced technologies to prevent war, deter aggression, and maintain peace.

The Delicate Balance Mar 27 2022 Few aspects of revenue law generate stronger feelings than the exercise of discretionary power by tax administrations. A delicate balance often needs to be struck between the legitimate needs of revenue authorities and the equally legitimate interests and rights of taxpayers. On the one hand, the executive and administration need to have sufficient capacity to apply the law; on the other, there is a need to maintain the principle of the rule of law that it is the elected legislature, and not the executive or tax administration, that establishes tax burdens. The chapters in this volume explore that delicate balance. *The Delicate Balance - Tax, Discretion and the Rule of Law* considers the critical questions that arise from the intersections of tax, discretion and the rule of law in modern common and civil law jurisdictions: What do we mean by tax discretion and how does it vary in conceptual and practical terms in different tax regimes? -What role should discretion play in tax systems that operate under the rule of law and how large should that role be? -What are the legal, political, institutional and other constraints that can prevent abuse of discretion? -To what extent can, and should, the

legislature safely delegate discretionary powers to tax administrations?

Data-intensive Text Processing with MapReduce Oct 22 2021 Our world is being revolutionized by data-driven methods: access to large amounts of data has generated new insights and opened exciting new opportunities in commerce, science, and computing applications. Processing the enormous quantities of data necessary for these advances requires large clusters, making distributed computing paradigms more crucial than ever. MapReduce is a programming model for expressing distributed computations on massive datasets and an execution framework for large-scale data processing on clusters of commodity servers. The programming model provides an easy-to-understand abstraction for designing scalable algorithms, while the execution framework transparently handles many system-level details, ranging from scheduling to synchronization to fault tolerance. This book focuses on MapReduce algorithm design, with an emphasis on text processing algorithms common in natural language processing, information retrieval, and machine learning. We introduce the notion of MapReduce design patterns, which represent general reusable solutions to commonly occurring problems across a variety of problem domains. This book not only intends to help the reader "think in MapReduce", but also discusses limitations of the programming model as well. This volume is a printed version of a work that appears in the Synthesis Digital Library of Engineering and Computer Science. Synthesis Lectures provide concise, original presentations of important research and development topics, published quickly, in digital and print formats.
