X: The Experience When Business Meets Design Mar 31 2020 Welcome to a new era of business in which your brand is defined by those who experience it. Do you know how your customers experience your brand today? Do you know how they really feel? Do you know what they say when you're not around? In an always-on world where everyone is connected to information and also one another, customer experience is your brand. And, without defining experiences, brands become victim to whatever people feel and share. In his new book *X: The Experience When Business Meets Design* bestselling author Brian Solis shares why great products are no longer good enough to win with customers and why creative marketing and delightful customer service too are not enough to succeed. In *X*, he shares why the future of business is experiential and how to create and cultivate meaningful experiences. This isn't your ordinary business book. Landscape Architecture as Storytelling Mar 24 2022 This book introduces students, practitioners, and laypeople to a comfortable approach to learning landscape architectural design free of design jargon and derived from their existing knowledge. A step-by-step process has readers consider their knowledge of language as metaphorically related to basic design and landscape design. Through information delivery and questioning processes, readers build on what they already know, their tacit understanding of language as applied to problem solving and storytelling. Everyone is a storyteller. Taken one step at a time through a three-tiered analogy of language, basic design, and landscape design, readers learn the makeup and role of such design features as points, lines, planes, volumes and sequential volumetric spaces that make up their worlds. With that, in a sense, new world view, and numerous questions and examples, readers begin to see that they in fact daily read the environments in which they live, work, play, raise families, and grow old. Once they realize how they read their surroundings they are helped to recognize that they can build narratives into their surroundings. At that point the existence of authored landscape narratives finds readers understanding a design process that relies on the designer-as-author, landscape-as-text, and participant, user-as-reader. That process has the reader write a first- or second-person narrative, visually interpret the written narrative into a storyboard, and turn the storyboard into a final design, the physical makeup of which is read by those who participate in it.
