**Guide to Reference Materials for Canadian Libraries** Oct 24 2021 \*\*\*\* About itself the 8th edition notes: "Primarily intended as an instructional guide for library personnel and researchers who work with reference materials, the Guide surveys the basic and most familiar or typical resources for general reference work, and for work with the disciplines of the humanities, social sciences, and pure and applied sciences." The 7th edition, titled *Guide to basic reference materials . . .*, is recommended by ARBA, v.16, but is missed by BCL3 and Sheehy. A solid work marred by the flimsy paper binding--a shockingly bad production decision: a bibliography gets repeated use. Annotation copyrighted by Book News, Inc., Portland, OR

The 1500 annotated entries are grouped into five chapters: general reference works, theology, humanities, social sciences, and history. The books listed include those dealing with topics peculiar to the church, such as liturgy and theological disciplines; and those dealing with the social sciences, literature, the arts, and similar subjects to which Catholics have traditionally contributed a unique perspective. Catholic authorship alone is not enough to justify the inclusion of a reference work; the contents or point of view must relate in some way to Catholicism. **Phosphorus Biogeochemistry of Sub-Tropical Ecosystems** Nov 24 2021 Phosphorus is one of the major nutrients limiting the productivity of terrestrial, wetland and aquatic ecosystems. Over the last decade several research projects were conducted on Florida's ecosystems from state and federal agencies and private industry to address water quality issues, and to develop management practices to control nutrient loads. Phosphorus Biogeochemistry in Sub-Tropical Ecosystems is the first thorough study of the role of phosphorus in ecological health and water quality ever published. Because of its vast and extensively studied ecosystems, Florida has often served as a national laboratory on current and future trends in ecosystem management. The reader will find studies at all levels of biological organization, from the cellular to entire ecological communities. The book is a definitive study of the role and behavior of phosphorus deposition in the upland/wetland/aquatic environment. The papers presented in this book are organized in specific groups: ecological analysis and global issues, biogeochemical transformations, biogeochemical responses, transport processes, phosphorus management, and synthesis. Although Florida's ecosystems are used as a case study, the results presented have global applications.
