 Coach the Person, Not the Problem Apr 27 2022 From a founding member of the coaching movement comes a detailed guide to mastering one of a coach's toughest skills: thoughtfully reflecting clients' words and expressions back to them so they see themselves and their world through new eyes. ⬜Coaches rely far too much on asking open-ended questions,⬜ says Marcia Reynolds. But questions only seek answers⬜inquiry provides insight. When, instead of just questions, clients hear their thoughts, opinions, and beliefs spoken by someone else, it prompts them to critically consider how their thinking affects their goals. Reynolds cites the latest brain science to show why reflective inquiry works and provides techniques, tips, and structures for creating breakthrough conversations. This book will free coaches from the cult of asking the magical question by offering five essential practices of reflective inquiry: focus on the person, not the problem; summarize what is heard and expressed; identify underlying beliefs and assumptions; unwrap the desired outcome; and articulate insights and commitments. Using these practices, combined with a respectful and caring presence, helps create a space where clients feel safe, seen, and valued for who they are. Coaches become change agents who actively recharge the human spirit. And clients naturally dive deeper and develop personalized solutions that may surprise even the coach.

Key Management Deployment Guide: Using the IBM Enterprise Key Management Foundation Oct 22 2021 In an increasingly interconnected world, data breaches grab headlines. The security of sensitive information is vital, and new requirements and regulatory bodies such as the Payment Card Industry Data Security Standard (PCI-DSS), Health Insurance Portability and Accountability Act (HIPAA), and Sarbanes-Oxley (SOX) create challenges for enterprises that use encryption to protect their information. Effective management of these keys is essential to ensure both the availability and security of the encrypted information. Centralized management of keys and certificates is necessary to perform the complex tasks that are related to key and certificate generation, renewal, and backup and recovery. The IBM® Enterprise Key Management Foundation (EKMF) is a flexible and highly secure key management system for the enterprise. It provides centralized key management on IBM zEnterprise® and distributed platforms for streamlined, efficient, and secure key and certificate management operations. This IBM Redbooks® publication introduces key concepts around a centralized key management infrastructure and depicts the proper planning, implementation, and management of such a system using the IBM Enterprise Key Management Foundation solution.

 Machine Learning with Python Aug 08 2020 As the second title in the Machine Learning for Beginners series, this book teaches beginners to code basic machine learning models using Python. The book is designed for beginners with basic background knowledge of machine learning, including common algorithms such as logistic regression and decision trees. If this doesn't describe your experience or if you need a refresher, key concepts from machine learning in the opening chapter and there are overviews of specific algorithms dispersed throughout this book. For a gentle and more detailed explanation of machine learning theory minus the code, I suggest reading the first book in this series Machine Learning for Absolute Beginners (Second Edition), which is written for a more general audience. In this step-by-step guide you will learn: - To code practical machine learning prediction models using a range of supervised learning algorithms including logistic regression, gradient boosting, and decision trees- Clean and inspect your data using free machine learning libraries- Visualize relationships in your dataset including Heatmaps and Pairplots using just a few lines of simple code- Develop your expertise in managing data using Python
