**The EU-Turkey Statement on Refugees** Dec 14 2020 This thought-provoking book critically analyses how the implementation of the EU-Turkey Statement on Refugees affects the rights of refugees and asylum seekers. Bringing together an in-depth examination of both EU and Turkish law and fieldwork data within a theoretical human rights framework, Hülya Kaya discusses the operational realities and failures of the agreement between Turkey and the EU from a socio-legal perspective. This timely book provides important evidence that refugee protection in the region of origin is not an effective solution to the refugee protection crisis, and casts doubt on the capacity of the agreement to contribute to fair burden sharing between states. Kaya illuminates the practical

and legal difficulties that refugees experience, and draws upon the political theory of Hannah Arendt to argue that the situation constitutes a further form of violence against refugees by hindering their ability to claim and exercise their fundamental human rights. Scholars and doctoral students specialising in refugee law and migration studies, as well as human rights lawyers, will find this book to be crucial reading. It will also be of interest to human rights advocates and those working in international organisations and NGOs in this area, alongside policy makers in the EU and Turkey.

**Impact of Covid-19 on the Careers of Women in Academic Sciences, Engineering, and Medicine** Aug 29 2019 The spring of 2020 marked a change in how almost everyone conducted their personal and professional lives, both within science, technology, engineering, mathematics, and medicine (STEMM) and beyond. The COVID-19 pandemic disrupted global scientific conferences and individual

laboratories and required people to find space in their homes from which to work. It blurred the boundaries between work and non-work, infusing ambiguity into everyday activities. While adaptations that allowed people to connect became more common, the evidence available at the end of 2020 suggests that the disruptions caused by the COVID-19 pandemic endangered the engagement, experience, and retention of women in academic STEM, and may roll back some of the achievement gains made by women in the academy to date. Impact of COVID-19 on the Careers of Women in Academic STEM identifies, names, and documents how the COVID-19 pandemic disrupted the careers of women in academic STEM during the initial 9-month period since March 2020 and considers how these disruptions - both positive and negative - might shape future progress for women. This publication builds on the 2020 report Promising Practices for Addressing the Underrepresentation of Women

in Science, Engineering, and Medicine to develop a comprehensive understanding of the nuanced ways these disruptions have manifested. Impact of COVID-19 on the Careers of Women in Academic STEM will inform the academic community as it emerges from the pandemic to mitigate any long-term negative consequences for the continued advancement of women in the academic STEM workforce and build on the adaptations and opportunities that have emerged.

**Impact Evaluation in Practice, Second Edition** Dec 02 2019 The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will

gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international

development community, universities, and policy makers looking to build better evidence around what works in development.

[Himalayan Weather and Climate and their Impact on the Environment](#) Oct 31 2019 This book proposes a unique and comprehensive integrated synthesis of the current understanding of the science of Himalayan dynamics and its manifestations on physical systems and ecosystems at different spatial and temporal scales. In particular, this work covers relevant aspects of weather and climate, paleoclimate, snow, glacier and hydrology, ecology/forestry among other topics associated with the Himalayas. It highlights the role of the Himalayas in defining local to regional to global scale impact on weather and climate. It includes Himalayan impact on defining physical basis of changing glacier systems, permafrost melting/thawing, climate variability, and hydrological balances. As a result, this volume represents an important synthesized overview

both for environmental and earth science researchers, and for policy makers and stakeholders interested in the physical and dynamical processes associated with the Himalayan massif.

Classroom Management and its Impact on Lesson Outcomes in Physics Feb 02 2020

The major purpose of research in the present study was to contribute to the clarification of physics-related learning conditions in the phase when students change from primary to secondary school stage. This purpose goes back to the divergent performance of German primary and secondary school students in the science part of international comparative studies which have placed teachers under considerable pressure to provide an effective working atmosphere in their classrooms including an appropriate use of time

for engagement in physics-specific contents. There is a wide consensus that, in developing efficient classroom management strategies, teachers can guarantee a higher amount of academic learning time, which proves relevant not only for students' school performance, but also for fostering their motivation to learn (science). The present study firstly aimed at contributing to the demand of a theoretical conceptualization that regards classroom management in the overall structure of quality of instruction. Against this background, the study suggests a clear, detailed definition of classroom management with three subconstructs discipline, rules and rituals and prevention of disruption, but also addresses the desiderata in terms of subject-specific research on classroom management.

*Fertilizer Quality and its Impacts on Technical Efficiency and Use Intensity in the North China Plain* Oct 12 2020 Fertilizer has helped the growth of agriculture for decades. However, its overuse in some regions has caused environmental and health problems due to pollution and contamination of groundwater. Fertilizer quality is another cause for concern in many countries, as the actual nutrient content may not match the labeled content on the packaging. The North China Plain is a region affected by both fertilizer overuse and quality

problems. This study delves into the issue using economic models and survey data of farm households. Is the effectiveness of fertilizer overstated? How do farmers respond to uncertainty in fertilizer quality? Can they differentiate between good and poor quality fertilizer?

**Fifty Years of Resident Outdoor Education, 1930-1980** Jan 15 2021 Fifty years of innovative programming in what has come to be called resident outdoor education are traced in this volume which examines the evolution of resident outdoor education from its early beginnings to the present. The several authors of this book are leaders in outdoor education who have been intimately involved in the development of programs and the teaching of other leaders. The various themes crystallize the essence of resident outdoor education as practiced in the United States from 1930-1980 and highlight the impact of this curriculum innovation on American education. Analyzing the impact that resident

outdoor education has had on educational philosophy and practice, this book brings together numerous experiences in developing programs. Two aspects of outdoor education are prominent herein. The first (the central theme of the book) is that there is a need for direct contact with the environment, that some learning makes a deeper impact and is retained longer when a concept or an object is discovered, observed, sensed, and interpreted in the natural setting. The second aspect addresses learning to live with our fellow creatures. It is the intent of this volume to make possible a greater understanding of the outdoor education movement and of the need for extending its benefits throughout our school systems.

**Blue Marble Health** Feb 13 2021 Why do diseases of poverty afflict more people in wealthy countries than in the developing world? In 2011, Dr. Peter J. Hotez relocated to Houston to launch Baylor's National School of Tropical

Medicine. He was shocked to discover that a number of neglected diseases often associated with developing countries were widespread in impoverished Texas communities. Despite the United States' economic prowess and first-world status, an estimated 12 million Americans living at the poverty level currently suffer from at least one neglected tropical disease, or NTD. Hotez concluded that the world's neglected diseases—which include tuberculosis, hookworm infection, lymphatic filariasis, Chagas disease, and leishmaniasis—are born first and foremost of extreme poverty. In this book, Hotez describes a new global paradigm known as “blue marble health,” through which he asserts that poor people living in wealthy countries account for most of the world's poverty-related illness. He explores the current state of neglected diseases in such disparate countries as Mexico, South Korea, Argentina, Australia, the United States, Japan, and Nigeria. By crafting public policy and relying on global partnerships to control or

eliminate some of the world's worst poverty-related illnesses, Hotez believes, it is possible to eliminate life-threatening disease while at the same time creating unprecedented opportunities for science and diplomacy. Clear, compassionate, and timely, Blue Marble Health is a must-read for leaders in global health, tropical medicine, and international development, along with anyone committed to helping the millions of people who are caught in the desperate cycle of poverty and disease.

Across the world hundreds of millions have lost their jobs. And over it all looms the specter of pandemic, and death. This book gives us a panoramic and synthetic overview of our current crisis. By focusing on finance and business, this book sets the pandemic story in a frame that casts a sobering new light on how unprepared the world was to fight the crisis, and how deep the ruptures in our way of living and doing business are

The Impact of the Social Sciences Sep 30 2019

The impact agenda is set to shape the way in which social scientists prioritise the work they choose to pursue, the research methods they use and how they publish their findings over the coming decade, but how much is currently

known about how social science research has made a mark on society? Based on a three year research project studying the impact of 360 UK-based academics on business, government and civil society sectors, this groundbreaking new book undertakes the most thorough analysis yet of how academic research in the social sciences achieves public policy impacts, contributes to economic prosperity, and informs public understanding of policy issues as well as economic and social changes. *The Impact of the Social Sciences* addresses and engages with key issues, including: identifying ways to conceptualise and model impact in the social sciences developing more sophisticated ways to measure academic and external impacts of social science research explaining how impacts from individual academics, research units and universities can be improved. This book is essential reading for researchers, academics and anyone involved in discussions about how to improve the value and impact of funded

research. You can read a snapshot of the results, *Visualising the Data*, free online. To download a PDF click [here](#), or to browse a flipbook, click [here](#).

**Promoting the Educational Success of Children and Youth Learning English** Jun 07

2020 Educating dual language learners (DLLs) and English learners (ELs) effectively is a national challenge with consequences both for individuals and for American society. Despite their linguistic, cognitive, and social potential, many ELs "who account for more than 9 percent of enrollment in grades K-12 in U.S. schools" are struggling to meet the requirements for academic success, and their prospects for success in postsecondary education and in the workforce are jeopardized as a result. *Promoting the Educational Success of Children and Youth Learning English: Promising Futures* examines how evidence based on research relevant to the development of

DLLs/ELs from birth to age 21 can inform education and health policies and related practices that can result in better educational outcomes. This report makes recommendations for policy, practice, and research and data collection focused on addressing the challenges in caring for and educating DLLs/ELs from birth to grade 12.

Learning from SARS May 07 2020 The emergence of severe acute respiratory syndrome (SARS) in late 2002 and 2003 challenged the global public health community to confront a novel epidemic that spread rapidly from its origins in southern China until it had reached

more than 25 other countries within a matter of months. In addition to the number of patients infected with the SARS virus, the disease had profound economic and political repercussions in many of the affected regions. Recent reports of isolated new SARS cases and a fear that the disease could reemerge and spread have put public health officials on high alert for any indications of possible new outbreaks. This report examines the response to SARS by public health systems in individual countries, the biology of the SARS coronavirus and related coronaviruses in animals, the economic and political fallout of the SARS epidemic, quarantine law and other public health measures that apply to combating infectious diseases, and the role of international organizations and scientific cooperation in halting the spread of SARS. The report provides an illuminating survey of findings from the epidemic, along with an assessment of what might be needed in order to contain any future outbreaks of SARS or other

emerging infections.

Water Risk and Its Impact on the Financial Markets and Society Jul 29 2019 Water risks, including the lack of access to fresh water for personal and industrial use, droughts, floods, and water contamination, are problems that are not new, yet, they are amplifying in the face of climate change, population growth, and rapid economic development. Properly identifying, measuring, and managing these risks as well as taking advantage of related mitigation opportunities is essential for the future well-being of firms across various industries, investors who invest in these firms, local and federal governments, and ultimately our society as a whole. This edited book sheds light on this topic by examining the unique measurement and modelling challenges associated with either the scarcity or overabundance of water and their

interaction with finance and society. Specifically, it explores approaches to assess and operationalize water risk, examines the vulnerability of institutions and markets, and discusses strategies for risk mitigation.

**Progress and Its Impact on the Nagas** Jun 19

2021 The term 'progress' is a modern Western notion that life is always improving and advancing toward an ideal state. It is a vital modern concept which underlies geographic explorations and scientific and technological inventions as well as the desire to harness nature in order to increase human beings' ease and comfort. With the advent of Western colonization and to the great detriment of the colonized, the notion of progress began to perniciously and pervasively permeate across cultures. This book details the impact of the notion of progress on the Nagas and their culture. The interaction between the Nagas and the West, beginning with British military conquest and followed by American missionary

intrusion, has resulted in the gradual demise of Naga culture. It is almost a cliché to assert that since the colonial contact, the long evolved Naga traditional values are being replaced by Western values. Consequences are still being felt in the lack of sense of direction and confusion among the Nagas today. Just like other Indigenous Peoples, whose history is characterized by traumatic cultural turmoil because of colonial interference, the Nagas have long been engaged in self-shame, self-negation and self-sabotage.
