History Year by Year Feb 13 2021 Go on an adventure along the timeline of history, year-by-year, from the stone age to the digital age History Year by Year is a children's history book like no other. It will take children on a stunning trip through time as they follow the history timeline that plots our life on Earth, from prehistoric man to how we live today. Over 1,500 pictures of artifacts, styles of dress, architectural triumphs and magnificent civilizations make this book a mini-history museum for kids, bringing history to life like no other. Learn even more about themes such as the Renaissance or the French Revolution with chapters that focus on specific movements. The 'child of the time' feature shows you how children would have lived during different historical periods. Ever wondered how children in Ancient Egypt got by? Or Viking England, the Industrial Revolution, or World War II? These informative chapters bring these periods of our history to life. History Year by Year is like no other history book for children. It combines facts, timelines and images and is perfect for any child looking to take an exciting visual journey through history (plus it's perfect for school projects). If you've ever had a question about history as a whole, History Year by Year joins the dots of history around the world, year by year, century by century.

Chronology of the Old Testament Mar 29 2022 Book and CD-ROM. The 'Chronology of the Old Testament' has one goal to accomplish: to demonstrate that every chronological statement contained in the Sacred Writ is consistent with all other chronological statements contained therein. The author carefully and thoroughly investigates the chronological and mathematical facts of the Old Testament, proving them to be accurate and reliable. This biblically sound, scholarly, and easy-to-understand book will enlighten and astound its readers with solutions and alternatives to many questions Bible scholars have had over the centuries. Were there 66, 70, or 75 'souls' in Egypt when Jacob arrived? Were the Hebrews in Egypt for 430 years, or a shorter length of time? How long did Jacob have to wait before marrying the first of Laban's daughters, and how long did he wait for the second? What year was Christ born? With reliable explanatory text, charts, and diagrams, this book provides a systematic framework of the chronology of the Bible from Genesis through the life of Christ. Wall-sized chronological charts included on CD-ROM.

Old-age Pensions Jul 09 2020

Bad Days in History Sep 30 2019 National Geographic author Michael Farquhar uncovers an instance of bad luck, epic misfortune, and unadulterated mayhem tied to every day of the year. From Caligula's blood-soaked end to hotelier Steve Wynn's unfortunate run-in with a priceless Picasso, these 365 tales of misery include lost fortunes (like the would-be Apple investor who pulled out in 1977 and missed out on a \$30 billion-dollar windfall), romance gone wrong (like the 16th-century Shah who experimented with an early form of Viagra with empire-changing results), and truly bizarre moments (like the Great Molasses Flood of 1919). Think you're having a bad day? Trust us, it gets worse.

Edgar Rice Burroughs - 100 Year Art Chronology Dec 02 2019 The Edgar Rice Burroughs 100 Year Art Chronology contains over 1,200 pages of material, spread over four volumes and includes 5000+ illustrations and 140,000 words. Its massive in scope and scale.

Science Oct 31 2019 In Science, Patricia Fara rewrites science's past to provide new ways of understanding and questioning our modern technological society. Aiming not just to provide information but to make people think, this unique book explores how science has become so powerful by describing the financial interests and imperial ambitions behind its success. Sweeping through the centuries from ancient Babylon right up to the latest hi-tech experiments in genetics and particle physics, Fara's book also ranges internationally, challenging notions of European superiority by emphasising the importance of scientific projects based around the world, including revealing discussions of China and the Islamic Empire alongside the more familiar stories about Copernicus's sun-centered astronomy, Newton's gravity, and Darwin's theory of evolution. We see for instance how Muslim leaders encouraged science by building massive libraries, hospitals, and astronomical observatories and we rediscover the significance of medieval Europe--long overlooked--where, surprisingly, religious institutions ensured science's survival, as the learning preserved in monasteries was subsequently developed in new and unique institutions: universities. Instead of focussing on esoteric experiments and abstract theories, she explains how science belongs to the practical world of war, politics and business. And rather than glorifying scientists as idealized heroes, she tells true stories about real people--men (and some women) who needed to earn their living, who made mistakes, and who trampled down their rivals. Finally, this provocative volume challenges scientific supremacy itself, arguing that science is successful not because it is always indubitably right, but because people have said that it is right. Science dominates modern life, but perhaps the globe will be better off by limiting science's powers and undoing some of its effects. "Dismantling popular myths, taking a truly global view and dispensing with false idols, Fara's highly readable survey of science's histories is a breath of fresh air. She unerringly pinpoints the defining moods of each age, treating the past with respect and the present with discernment. This wonderfully literate book tells a story that is far, far more interesting than the tidy fictions of hindsight." -- Philip Ball, Consultant Editor of Nature "It's been a very long time since any reputable historian of science had the desire, the knowledge, or the nerve to undertake a book like this-- an attempt to survey the development of science from Antiquity to the present, notably including non-European materials. Patricia Fara has succeeded: Science is an elegant and compact creative synthesis of the piecemeal researches of generations of academic historians. It deserves the widest possible readership." - Steven Shapin, Professor of the History of Science, Harvard, and author of The Scientific Revolution Patricia Fara lectures in the History and Philosophy of Science at the University of Cambridge and is the Senior Tutor of Clare College. She is the author of numerous books, including Fatal Attraction: Magnetic Mysteries of the Enlightenment and Newton: The Making of Genius. Her writing has appeared in History Today, New Scientist, Nature, The Times and New Statesman, and she writes a regular column on scientific portraits for Endeavour.
