Real Essentialism Oct 03 2020 Real Essentialism presents a comprehensive defence of neo-Aristotelian essentialism. Do objects have essences? Must they be the kinds of things they are in spite of the changes they undergo? Can we know what things are really like – can we define and classify reality? Many if not most philosophers doubt this, influenced by centuries of empiricism, and by the anti-essentialism of Wittgenstein, Quine, Popper, and other thinkers. Real Essentialism reinvigorates the tradition of realist, essentialist metaphysics, defending the reality and knowability of essence, the possibility of objective, immutable definition, and its relevance to contemporary scientific and metaphysical issues such as whether essence transcends physics and chemistry, the essence of life, the nature of biological species, and the nature of the person.

New Scientist Jan 18 2022 New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

Statutes of the Union of South Africa 1910- Apr 28 2020

The Snake the Crocodile and the Dog Aug 21 2019 In Amelia's seventh adventure, she and Emerson take passage on a boat travelling up the Nile, enjoying a second honeymoon while they search for Nefertiti's tomb. On the other hand, they might be heading towards murder. An exotic slave woman, a Siamese cat and a den of conspirators unite to snatch away Amelia's happiness unless she reveals a certain secret...and at the remote dig in Amarna what she uncovers is a shocking present-day peril: the loss of treasures far more precious than any antiquity - her husband's love or both their lives!

Nature's Saviours Feb 19 2022 Today's celebrity conservationists, many of whom made their reputations through television and other visual media, play a major role in drawing public attention to an increasingly threatened world. This book, one of the first to address this contribution, focuses on five key figures: the English naturalist David Attenborough, the French marine adventurer Jacques-Yves Cousteau, the American primatologist Dian Fossey, the Canadian scientist-broadcaster-activist David Suzuki, and the Australian 'crocodile hunter' Steve Irwin. Some of the issues the author addresses include: What is the changing relationship between western conservation and celebrity? How has the spread of television helped shape and mediate this relationship? To what extent can celebrity conservation be seen as part of a global system in which conservation, like celebrity, is big business? The book critically examines the heroic status accorded to the five figures mentioned above, taking in the various discourses – around nature, science, nation, gender – through which they and their work have been presented to us. In doing so, it fills in the cultural, historical and ideological background behind contemporary celebrity conservationism as a popular expression of a chronically endangered world.

Random Violence Feb 07 2021 In Johannesburg, prosperous white people live in gated communities - and when they exit their cars to open the gates, carjackings are common. But seldom is the victim killed, much less shot twice, like Annette Botha. Piet Botha, her husband, is the primary suspect in his wife's murder. As Jade probes into the Botha case and other recent carjackings, a pattern begins to emerge - a pattern that goes back to her father's murder and involves a vast and intricate series of crimes for profit.

Crocodile Fever Jun 30 2020 Crocodile Fever, first published in 1954, is a fascinating look at the life and adventures of Bryan Herbert Dempster. Dempster, born in South Africa, was perhaps the first white man to successfully hunt crocodiles, not for sport but to obtain their skins for his livelihood. The book details the risks and special techniques he developed by long trial-and-error to hunt these river creatures, as well as his personal struggles with his failing health, his estranged family, and impassive government officials. Much of the hunting took place in the Kariba Gorge of the Zambezi River, now completely inundated by the Kariba Dam and part of the world's largest man-made lake. Included are 16 pages of photographs. Author Lawrence Earl was an internationally known journalist, novelist, and photographer.

Relativism Jun 11 2021 The essays in this volume grapple with one of the most intriguing, enduring, and far-reaching philosophical problems of our age. Relativism comes in many varieties. It is often defined as the belief that truth, goodness, or beauty is relative—relative, that is, to some context or frame of reference—and that no absolute standards can adjudicate between competing reference frames. This anthology captures the significance and range of relativistic doctrines, rehearsing their virtues and vices and reflecting a spectrum of attitudes toward relativism. Invoking diverse philosophical orientations, these doctrines concern conceptions of relativism in relation to pluralism and moral relativism; facts and conceptual schemes; realism and objectivity; solidarity and rationality; universalism and foundationalism; and feminism and poststructuralism. The thirty-three essays in this book include nine original works and many classical articles.

The Crocodile Caper Jul 20 2019 What happens when a bunch of blokes get together at the back of the local pub one afternoon and someone proposes they plot the perfect crime Sometimes an idea can be extrapolated too far and become larger than itself. This is how plans can go awry, how revolutions begin. And, it can happen to anyone who is easily led. This is a tale to be approached with caution. A whole load of croc...

The Crocodile's Last Embrace Mar 28 2020 Now appearing in trade paperback original format: "One of the most appealing heroines to appear in the pages on a mystery" (Library Journal). Returning from Europe, intrepid explorer Jade dei Cameron arrives in Kenya with bittersweet memories-and the certainty that Africa is her home and Sam Featherstone the man she wants to share her life with. When a letter arrives from America, Jade hopes it's Sam sending word of his return. Instead, it's a message written in the hand of her long-dead fiancé, asking "Why did you let me die?" When two men die under mysterious circumstances and Jade discovers that her old nemesis, Lilith Worthy, has escaped from prison, the deaths and the letter form the most dangerous case Jade has ever faced, pitting her against a ferocious crocodile-and an even more deadly human killer.

The Reproductive Biology of the Chelonia Jul 24 2022 This book presents a comparative view of chelonian reproduction and discusses ecophysiological implications for their captive breeding. Chelonians, with their protective rigid armour, are a phylogenetically antique group of reptiles which radiated to occupy niches from the open waters of the oceans, to rivers, creeks, swamps, forests, savannahs, and deserts. A few North American turtle species have been well studied, but until recently reproductive data on other chelonian species have been scarce. The way in which chelonians adjust their conservative mode of reproduction to the various requirements of their habitats and life styles is the theme of this book; the physiology of reproduction and its interplay with ecological conditions are its central subjects.

Forest and Forest Development in India Aug 13 2021 India has the largest concentration of tribals in the world. In recent years, a vibrant feature of North-East Region has been the rise of ethnic consciousness leading to tribal movement and ethnic unrest. This vital problem faced by us today is largely on inheritance from our recent past and a close look back is called for to unravel some trends for second thought to solve this burning problem. In the present book, Dr. Paul has tried to explain the various dimensions of tribal movements with special reference to 'Udayachal Movement' in Assam Valley. This ia pioneering attempt where he explored sociologically the genesis of plain's tribal movement of Assam Valley. His contention is that Udayachal Movement has not come out from a vacuum. The contradictions introduced by the Unequal socio-political forces in the tribal communal social system during the colonial era and the consolidation of the same in the post-Independence period challenged their existence.

Statement Showing the Progress of Development Schemes Under [the] Five Year Plan Apr 21 2022

Conservation and the Use of Wildlife Resources Nov 04 2020 Not everybody cares about the fate of wild animals or the state of the natural environment. I met a lady who said it wouldn't worry her if all the wild animals in the world disappeared overnight. She was a city person- she said. There are also people who would prefer to let animals become extinct than to have them kept in captivity - no matter how progressive the zoo. There are those who, on principle, will not eat meat, let alone do the killing, and there are those who enjoy nothing so much as shooting birds. People in the last two camps may oppose each other in claiming to be conservationists. Extremists are unlikely to find their opinions being reversed by this book but, because of the scope of the subject, I believe there is a good chance that anybody with an interest in wildlife will find in it something new to think about. It may not be too much to hope that a few disagreements might also be settled because I suspect there is more common ground than is generally realized among those with opposing views.

Riding a Crocodile Oct 15 2021 Abraham Nevski is a dedicated and eccentric professor of medicine at the Royal Prince John Hospital. He prides himself on his diagnostic skills and powers of reasoning. On returning to work after a break he becomes aware of disturbing changes taking place in the hospital. A series of suspicious deaths then throws his world into confusion. Nevski's inner turmoil grows and he has to confront the dangers that close in around him. Riding a Crocodile is both an insider's account of life in a major teaching hospital and a chilling detective story, exploring life and death issues of urgent contemporary relevance.

The Enormous Crocodile Dec 05 2020 From the bestselling author of Charlie and the Chocolate Factory and The BFG! The Enormous Crocodile is a horrid greedy grumpy brute who loves to guzzle up little boys and girls. But the other animals have had enough of his cunning tricks, so they scheme to get the better of this foul fiend, once and for all! This picture book edition has a beautiful full-color interior and large trim to feature Quentin Blake's iconic art.

Crocodile on the Sandbank Jan 26 2020 Amelia Peabody is Elizabeth Peters' most brilliant and best-loved creation, a thoroughly Victorian feminist who takes the stuffy world of archaeology by storm with her shocking men's pants and no-nonsense attitude! In this first adventure, our headstrong heroine decides to use her substantial inheritance to see the world. On her travels, she rescues a gentlewoman in distress - Evelyn Barton-Forbes - and the two become friends. The two companions continue to Egypt where they face mysteries, mummies and the redoubtable Radcliffe Emerson, an outspoken archaeologist, who doesn't need women to help him solve mysteries -- at least that's what he thinks!

Socio-ecological Studies in Natural Protected Areas May 30 2020 This book explores the interactions of local inhabitants and environmental systems in the Protected Natural Areas of Mexico. Its goal is to help understand how social groups contextualize ecological knowledge, how human activities contribute to modifying the environmental matrix, how cultural and economic aspects influence the use, management and conservation of their ecological environment, and how social phenomena are to be viewed against the backdrop of ecological knowledge. The book reviews the epistemological and historical bases of the socio-ecological relationship, and addresses the evolution of human-natural systems. From a methodological standpoint, it assesses the tools required for the integration of "human" and "natural" dimensions in the management of the environmental matrix. Further, in the case studies section, it reviews valuable recent experiences concerning the retro-interactions of local inhabitants with their environmental matrix. Given its scope, the book offers a valuable asset for researchers and professionals all over the world, especially those working in Latin American countries.

International symposium and conference Aug 01 2020

Secrets of the Paradox Nov 23 2019 Far from merely recycling what we already know about certain paradoxes, this book breaks entirely new ground by providing what everyone really wants: solutions. The king of all paradoxes is the Liar ('This statement is false.' If it is true, it is false; if it is false, it is true), which in its earliest form is over two and a half thousand years old. Throughout all this time it has resisted every attempt to fully understand it. This work finally unlocks the secrets of the Liar, exposing principles, patterns and formulae that have long lain hidden. Several other important paradoxes also come under the logical searchlight and they too surrender their treasures. Though paradoxes are inherently difficult, this book approaches them in a clear and entertaining manner, using plain English. Secrets of the Paradox is written for the general reader, yet is sufficiently rigorous to satisfy the demands of the professional philosopher. If you relish an intellectual challenge, this book is for you!

Sensitivity of Mangrove Ecosystem to Changing Climate May 22 2022 Mangroves are basically salt tolerant forest ecosystems found mainly in tropical and sub-tropical inter-tidal regions. Till about 1960s, mangroves were largely viewed as "economically unproductive areas" and were therefore destroyed for reclaiming land for various economic and commercial activities. Gradually, with the passage of time, the economic and ecological benefits of mangroves have become visible and their importance is now well appreciated. Today, mangroves are observed in about 30 countries in tropical subtropical regions covering

an area of about 99,300 Sq.Km. However, during the past 50 years, over 50% of the mangrove cover has been lost, mainly because of the increased pressure of human activities like shrimp farming and agriculture, forestry, salt extraction, urban development, tourist development and infrastructure. Also, dam on rivers, contamination of sea waters caused by heavy metals, oil spills, pesticides and other products etc. have been found to be responsible for the decline of mangroves. Although the temperature effect on growth and species diversity is not known, sea-level rise may pose a serious threat to these ecosystems. The present book addresses all these important issues in separate chapters with some interesting case studies whose data may serve as pathfinder for future researches in the sphere of the influence of climate change on mangrove ecosystem. The role of mangroves in the sector of bioremediation is a unique feather in the crown of this coastal and brackishwater vegetation that may be taken up by the coastal industries in order to maintain the health of ambient environment. This book seeks to discover and to assess the vulnerability of climate change on mangrove flora and fauna, their role in carbon sequestration and some interesting case studies by some groups of dedicated researchers that may serve as the basis of future climate related policies.

Deliberation, Representation, Equity: Research Approaches, Tools and Algorithms for Participatory Processes Jun 18 2019 In democratic societies there is widespread acknowledgment of the need to incorporate citizens' input in decision-making processes in more or less structured ways. But participatory decision making is balancing on the borders of inclusion, structure, precision and accuracy. To simply enable more participation will not yield enhanced democracy, and there is a clear need for more elaborated elicitation and decision analytical tools. This rigorous and thought-provoking volume draws on a stimulating variety of international case studies, from flood risk management in the Red River Delta of Vietnam, to the consideration of alternatives to gold mining in Ro?ia Montan? in Transylvania, to the application of multi-criteria decision analysis in evaluating the impact of e-learning opportunities at Uganda's Makerere University. This book is important new reading for decision makers in government, public administration and urban planning, as well as students and researchers in the fields of participatory democracy, urban planning, social policy, communication design, participatory art, decision theory, risk analysis and computer and systems sciences.

Celebrity Colonialism Mar 20 2022 Celebrity Colonialism brings together studies on an array of personalities, movements and events from the colonial era to the present, and explores the intersection of discourses, formations and institutions that condition celebrity in colonial and postcolonial cultures. Across nineteen chapters, it examines the entanglements of fame and power fame in colonial and postcolonial settings. Each chapter demonstrates the sometimes highly ambivalent roles played by famous personalities as endorsements and apologists for, antagonists and challengers of, colonial, imperial and postcolonial institutions and practices. And each in their way provides an insight into the complex set of meanings implied by novel term "celebrity colonialism." The contributions to this collection demonstrate that celebrity provides a powerful lens for examining the nexus of discourses, institutions and practices associated with the dynamics of appropriation, domination, resistance and reconciliation that characterize colonial and postcolonial cultural politics. Taken together the contributions to Celebrity Colonialism argue that the examination of celebrity promises to enrich our understanding of what colonialism was and, more significantly, what it has become.

New Scientist Jul 12 2021 New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

The Purari — tropical environment of a high rainfall river basin Sep 21 2019 One of the major river systems of our country, the Purari River, finds its outlet to the sea in the Gulf of Papua on the southern coast of Papua New Guinea. All highlands provinces contribute to this mighty river: the Erave of the Southern Highlands Province joins with the Kaugel and Wahgi Rivers (Western High lands), the Tua River (Simbu), and Asaro and Aure Rivers of the Eastern High lands Province to make the Purari the third largest river in P. N. G. Unlike its rivals, the Fly and the Sepik, the distance between its escape from the mountains and its entrance to the sea is short. After winding its way mostly through deep gorges flanked by high mountains, the river leaves the foothills of the southern slopes of the central cordillera barely eighty kilometers from the sea. The energy potential of such a river is enormous. Could the waters be utilised in any way to the advantage of the nation? Twelve years ago the Electricity Com mission of Papua New Guinea proposed an answer to this question: the building of a dam across the river in the Wabo area of the Gulf Province. The generation of vast quantities of hydro-electric power could be fed into a national distribution grid and heavy industries could be established in the Gulf Province and other suitable localities to benefit from this power.

New Scientist Nov 16 2021 New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

THE FREE CROCODILE Aug 25 2022 For decades, Steffen Pichler travelled the most remote coasts of the planet by sea kayak and fed on nature. In the far north-east of Australia, he extensively encountered the largest reptiles on earth, the saltwater crocodiles. Thereby he made a spectacular discovery that may seem absurd at first glance: This animal, suited with enormous physical power and a fearsome appearance, has adapted, both in anatomy and behaviour, in ways to ensure that it disturbs and damages weaker lifeforms in its environment as little as possible, for an absolute apex predator on the very top of the ecological food pyramid. This can be demonstrated seamlessly in all characteristics of anatomy as well as behaviour, which in this respect could not be improved even theoretically. In everyday life, it is evident in extreme inconspicuousness, calmness and restraint. But even the killing of the prey, which is unavoidable in the ecological top position, occurs so surprisingly and quickly that the suffering produced could not be less. Pichler proves, also on the basis of his photographs of free-living saltwater crocodiles, that all this is the result of an evolutionary adaptation to the most fundamental laws of animate nature and that precisely here lies the true reason for the unprecedented permanence of the life form "crocodile" at the top of the food pyramid with numerous species for over 250 million years. He shows that these laws must have ordered life since its beginnings and that they can be described in a similarly concrete way as is possible with the already known physical laws of the space-time structure, such as gravity. A reflection that opens up a huge field of possible knowledge that has not yet been tapped in the natural sciences. In this way, the true core cause of all the present problems of civilisation becomes recognisable and even greater dangers become visible, which have arisen through the disregard of the said laws of nature. And finally, the reflection even leads beyond the observable world of the universe - in a serious approach based on pure observation and logic. Pictures and more: www.saltwatercrocodile.info

The Yellow Eyes of Crocodiles Mar 08 2021 Le Divorcee meets The Elegance of the Hedgehog in this hilariously entertaining mega-bestseller from France When her chronically unemployed husband runs off to start a crocodile farm in Kenya with his mistress, Joséphine Cortés is left in an unhappy state of affairs. The mother of two—confident, beautiful teenage Hortense and shy, babyish Zoé—is forced to maintain a stable family life while making ends meet on her meager salary as a medieval history scholar. Meanwhile, Joséphine's charismatic sister Iris seems to have it all—a wealthy husband, gorgeous looks, and a très chic Paris address—but she dreams of bringing meaning back into her life. When Iris charms a famous publisher into offering her a lucrative deal for a twelfth-century romance, she offers her sister a deal of her own: Joséphine will write the novel and pocket all the proceeds, but the book will be published under Iris's name. All is well—that is, until the book becomes the literary sensation of the season.

Biodiversity Conservation and Habitat Management - Volume II Oct 23 2019 Biodiversity Conservation and Habitat Management is a component of Encyclopedia of Natural Resources Policy and Management in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Biodiversity is declining worldwide at a very unprecedented rate as a complex response to several human-induced changes in the global environment. The magnitude of these changes is so large and their effects are so strongly linked to the altered ecosystem processes and to human (ab-)use of natural resources that biodiversity loss is today perceived as one of the most important issues that humankind should face with extreme urgency. Disseminating information, raising awareness, and propelling concern within a diversified target audience (general public, schools, local authorities, and government agencies) are also essential to develop shared responsibility and to encourage collaborative efforts and compliance. This has been the main objective of "Biodiversity Conservation and Habitat Management". The Theme on Biodiversity Conservation and Habitat Management provides the essential aspects and a myriad of issues of great relevance to our world in eight major topics of discussion, and is focused on 1) History and Overview of Biodiversity Conservation and Protected Areas, 2) Management of Forests and other Wooded Habitats, 3) Management of Savannas and Other Open Habitats, 4) Management of Wetlands, 5) Management of Tourism and Human Recreation Pressure, 6) Conservation Strategies, Species Action Plans and Translocation, 7) Captive Breeding and Gene Banks, and 8) Eradication and Control of Invasive Species. These two volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

Ethics of Biodiversity Conservation May 10 2021 In 1864 in India, the British Raj established the Imperial Forest Department. Social forestry got a major boost in the early 1980s, initiating a new approach to deal with the problem of biotic interference on forest land. A great change was made in forest and forestry management for the protection and development of forests, where Forest Protection Committees (FPCs) were formed by villagers, following the Arabari Model Community forest experiment in West Bengal, for usufruct rights and revenue sharing, which is unique in the history of forest management in the world. Ethics of Biodiversity Conservation takes a unique longitudinal view of this important forestry management case study. Today, increasing human population, growing industrialization, pollution, and climate change, creates the challenge of determining ways and means of ensuring that biodiversity conservation is an integral part of forest management.
