Universals in Comparative Morphology Dec 24 2021 An argument for, and account of linguistic universals in the morphology of comparison, combining empirical breadth and theoretical rigor. This groundbreaking study of the morphology of comparison yields a surprising result: that even in suppletion (the wholesale replacement of one stem by a phonologically unrelated stem, as in good-better-best) there emerge strikingly robust patterns, virtually exceptionless generalizations across languages. Jonathan David Bobaljik describes the systematicity in suppletion, and argues that at least five generalizations are solid contenders for the status of linguistic universals. The major topics discussed include suppletion, comparative and superlative formation, deadjectival verbs, and lexical decomposition. Bobaljik's primary focus is on morphological theory, but his argument also aims to integrate evidence from a variety of subfields into a coherent whole. In the course of his analysis, Bobaljik argues that the assumptions needed bear on choices among theoretical frameworks and that the framework of Distributed Morphology has the right architecture to support the account. In addition to the theoretical implications of the generalizations, Bobaljik suggests that the striking patterns of regularity in what otherwise appears to be the most irregular of linguistic domains provide compelling evidence for Universal Grammar. The book strikes a unique balance between empirical breadth and theoretical detail. The phenomenon that is the main focus of the argument, suppletion in adjectival gradation, is rare enough that Bobaljik is able to present an essentially comprehensive description of the facts; at the same time, it is common enough to offer sufficient variation to explore the question of universals over a significant dataset of more than three hundred languages.

Microprocessor Architecture and Microprogramming Feb 11 2021 This text explores the principles by which microprocessors actually operate, rather than how a specific processor is used. Adopting an inductive approach, it surveys the technology involved with state machine design, and illustrates the concept of micro-programming a state machine by application in a simple computer CPU.

Isothermes und thermisch-mechanisches Ermüdungsverhalten von Verbundwerkstoffen mit Durchdringungsgefüge (Preform-MMCs) Jul 31 2022 This study deals with the fatigue behaviour of metal-matrix-composites (MMCs) having ceramic contents of 30 to 39 Vol-%. The MMCs were produced by way of infiltrating a ceramic preform by an aluminium alloy. The characterisation of the MMC's cyclic and fatigue behaviour was researched on the basis of isothermal and thermal-mechanical fatigue tests.

Religious Orders Vol 1 Apr 27 2022 This is the first of a series of volumes which have become recognised as one of the great monuments of English historical scholarship. The late Dom David Knowles' work on the subject in 1929; The Monastic Order in England appeared in 1948, 1955 and 1959. This volume begins the account of a whole way of Christian life and a unique element of English civilisation, from Anglo-Saxon times to the mid-sixteenth century. It opens with a survey of monastic life and activities of the old orders to 1340; goes on to record the impact of the Friars, and concludes with a general survey of the monasteries and their world.

Narration and Hero May 05 2020 By the early middle ages vernacular aristocratic traditions of heroic narration were firmly established in Western and Northern Europe. Although there are regional, linguistic and formal differences, one can observe a number of similarities. Oral literature disseminates a range of themes that are shared by narratives in most parts

of the continent. In all the European regions, this tradition of heroic narration came into contact with Christianity, which led to modifications. Similar processes of adaptation and transformation can be traced everywhere in this field of early European vernacular narrative. But with the increasing specialization of academic fields over the last half century, inter-disciplinary dialogue has become increasingly difficult. The volume is a contribution to renew the inter-disciplinary dialogue about common themes, topics and motifs in Nordic, Roman, Anglo-Saxon and Germanic literature, and about the different methodologies to explore them.

Die dänischen Eufemiaviser und die Rezeption höfischer Kultur im spätmittelalterlichen Dänemark – The Eufemiaviser and the Reception of Courtly Culture in Late Medieval Denmark
May 29 2022 Das Buch präsentiert Texte, die ein einzigartiges Zeugnis kontinentaler höfischer Erzählkunst in der dänischen Literatur zwischen Spätmittelalter und Früher Neuzeit darstellen: die Eufemiaviser (Eufemia-Gedichte), die in der Zeit um 1470–1480 über französische und altschwedische Vorlagen ins Dänische übersetzt wurden. In der skandinavistischen Forschung wurden sie bisher kaum untersucht. This book presents texts which are a unique testimony in Danish literature between the Late Middle Ages and the Early Modern period: the so-called Eufemiaviser (Eufemia poems), courtly verse romances, translated into Danish via Old French and Old Swedish sources in the later part of the 15th century. These texts have hardly been studied in Scandinavian research so far.

Quantitative Linguistik / Quantitative Linguistics Jun 05 2020 Over the past two decades, statistical and other quantitative concepts, models and methods have been increasingly gaining importance and interest in all areas of linguistics and text analysis, as well as in a number of neighboring disciplines and areas of application. The term "quantitative linguistics" comprises all scientific and technical approaches which use such terms and methods in the analysis of or work with language(s), texts and other related subjects. The 71 articles in this handbook, written by internationally-recognized experts, offer a broad, up-to-date overview of the scientific-theoretical principles, the history, the diversity of the subject areas studied, the methods and models used, the results obtained thus far and their applications. The articles are divided up into thirteen chapters: the first chapter includes contributions on the basic principles and the history of the field, nine additional chapters are dedicated to individual descriptions of the levels of linguistic research (from phonology to pragmatics) as well as typological, diachronic and geolinguistic questions. The next two chapters include a description of important models, hypotheses and principles; selected areas of application; and references to neighboring disciplines. The last portion of the handbook is an informative contribution, with information about publication forums, bibliographies, major projects, Internet links, etc. This handbook is useful not only for researchers, teachers and students of all branches of linguistics and the philologies, but also for scientists in neighboring fields, whose theoretical and empirical research touches on linguistic questions (for instance, psychology and sociology), or for those who want to make use of the proven methods or results from quantitative linguistics in their own research.

Railway Transportation Systems Mar 27 2022 Railway Transportation Systems covers the entire range of railway passenger systems, from conventional and high-speed intercity systems to suburban, regional, operating on steep gradients, and urban ones. It also examines in depth freight railway systems transporting conventional loads, heavy loads, and dangerous goods. For each system, the text provides a definition; an overview of its evolution and examples of good practice; the main design, construction, and operational characteristics; and the preconditions for its selection. Additionally, it offers a general overview of safety, interfaces with the environment, forces acting on the track, and techniques that govern the stability and guidance of railway vehicles. This new edition brings two new chapters. One concerns pre-feasibility studies of urban rail projects, and the other analyses the operation of railway systems under specific weather conditions and natural phenomena. New material examines dilemmas, trends and innovations in rail freight transportation; a new definition for high-speed rail; a number of case studies; and an update of cutting-edge technologies. It is ideal for graduate students, engineers, consultants, manufacturers, and transport company executives who need a reference and guide.
