Missing Middle Housing Apr 11 2021 Today, there is a tremendous mismatch between the available housing stock in the US and the housing options that people want and need. The post-WWII, auto-centric, single-family-development model no longer meets the needs of residents. Urban areas in the US are experiencing dramatically shifting household and cultural demographics and a growing demand for walkable urban living. Missing Middle Housing, a term coined by Daniel Parolek, describes the walkable, desirable, yet attainable housing that many people across the country are struggling to find. Missing Middle Housing types—such as duplexes, fourplexes, and bungalow courts—can provide options along a spectrum of affordability. In Missing Middle Housing, Parolek, an architect and urban designer, illustrates the power of these housing types to meet today's diverse housing needs. With the benefit of beautiful full-color graphics, Parolek goes into depth about the benefits and qualities of Missing Middle Housing. The book demonstrates why more developers should be building Missing Middle Housing and defines the barriers cities need to remove to enable it to be built. Case studies of built projects show what is possible, from the Prairie Queen Neighborhood in Omaha, Nebraska to the Sonoma Wildfire Cottages, in California. A chapter from urban scholar Arthur C. Nelson uses data analysis to highlight the urgency to deliver Missing Middle Housing. Parolek proves that density is too blunt of an instrument to effectively regulate for twenty-first-century housing needs. Complete industries and systems will have to be rethought to help deliver the broad range of Missing Middle Housing needed to meet the demand, as this book shows. Whether you are a planner, architect, builder, or city leader, Missing Middle Housing will help you think differently about how to address housing needs for today's communities.

Bridge Decks Nov 25 2019 This book is a comprehensive reference for the evaluation, testing, selection, and examination of relevant design criteria and alternatives for bridge decks, which appear in the AASHTO/LRFD design specifications. Important challenges to civil engineers, such as life cycle cost analysis, and constructability, particularly as related to maintaining traffic during deck replacement, are discussed. The authors discuss why the use of standard bridge deck designs is not always possible on bridge rehabilitation projects. This practical reference will aid busy engineers in dealing with the major changes that will mandate much greater attention to deck selection and design in the future. For example, most future bridge projects will involve rehabilitation or replacement--which makes traffic maintenance a major issue--and life cycle cost analysis is quickly becoming mandatory in the U.S. This guide is intended to be used throughout the development of any construction project involving bridges. About the Authors Neal H. Bettigole, P.E., was director of the Exodermic Bridge Deck Institute, which he founded in 1985. Rita Robison was a freelance ditor/writer who worked as both an associate and a senior editor for Civil Engineering magazine.
