legitimate ones: the New York Times's anonymous whistleblowing system, for example, and the use of encryption by political dissidents. Defining the Dark Web straightforwardly as websites that can be accessed only with special routing software, and noting the frequent use of "legitimate" and its variations by users, journalists, and law enforcement to describe Dark Web practices (judging them "legit" or "sh!t"), Gehl uses the concept of legitimacy as a window into the Dark Web. He does so by examining the history of three Dark Web systems: Freenet, Tor, and I2P. Gehl presents three distinct meanings of legitimate: legitimate force, or the state's claim to a monopoly on violence; organizational propriety; and authenticity. He explores how Freenet, Tor, and I2P grappled with these different meanings, and then discusses each form of legitimacy in detail by examining Dark Web markets, search engines, and social networking sites. Finally, taking a broader view of the Dark Web, Gehl argues for the value of anonymous political speech in a time of ubiquitous surveillance. If we shut down the Dark Web, he argues, we lose a valuable channel for dissent.

Reading Moving Letters May 02 2020 »Digital media« is increasingly finding its way into the discussions of the humanities classroom. But while there is a number of grand theoretical texts about digital literature there as yet is little in the way of resources for discussing the down-to-earth practices of research, teaching, and curriculum necessary for this work to mature. This book presents contributions by scholars and teachers from different countries and academic environments who articulate their approach to the study and teaching of digital literature and thus give a broader audience an idea of the state-of-the-art of the subject matter also in international comparison.

Chinese Walls in Time and Space Aug 29 2022

My Paperback Book Mar 24 2022

The Great Wall Aug 17 2021 A "gripping, colorful" history of China's Great Wall that explores the conquests and cataclysms of the empire from 1000 BC to the present day (Publishers Weekly). Over two thousand years old, the Great Wall of China is a symbolic and physical dividing line between the civilized Chinese and the "barbarians" at their borders. Historian Julia Lovell looks behind the intimidating fortification and its mythology to uncover a complex history far more fragmented and less illustrious than its crowds of visitors imagine

today. Lovell's story winds through the lives of the millions of individuals who built and attacked it, and recounts how succeeding dynasties built sections of the wall as defenses against the invading Huns, Mongols, and Turks, and how the Ming dynasty, in its quest to create an empire, joined the regional ramparts to make what the Chinese call the "10,000 Li" or the "long wall." An epic that reveals the true history of a nation, The Great Wall is "a supremely inviting entrée to the country" and essential reading for anyone who wants to understand China's past, present, and future (Booklist).

Social Monitoring for Public Health Oct 07 2020 Public health thrives on high-quality evidence, yet acquiring meaningful data on a

population remains a central challenge of public health research and practice. Social monitoring, the analysis of social media and other user-generated web data, has brought advances in the way we leverage population data to understand health. Social media offers advantages over traditional data sources, including real-time data availability, ease of access, and reduced cost. Social media allows us to ask, and answer, questions we never thought possible. This book presents an overview of the progress on uses of social monitoring to study public health over the past decade. We explain available data sources, common methods, and survey research on social monitoring in a wide range of public health areas. Our examples come from topics such as disease surveillance, behavioral medicine, and mental health, among others. We explore the limitations and concerns of these methods. Our survey of this exciting new field of data-driven research lays out future research directions.

Handbook of Network and System Administration Jul 28 2022 System administration is about the design, running and maintenance of human-computer systems. Examples of human-computer systems include business enterprises, service institutions and any extensive machinery that is operated by, or interacts with human beings. System administration is often thought of as the technological side of a system: the architecture, construction and optimization of the collaborating parts, but it also occasionally touches on softer factors such as user assistance (help desks), ethical considerations in deploying a system, and the larger implications of its design for others who come into contact with it. This book summarizes the state of research and practice in this emerging field of network and system administration, in an anthology of chapters written by the top academics in the field. The authors include members of the IST-EMANICS Network of Excellence in Network Management. This book will be a valuable reference work for researchers and senior system managers wanting to understand the essentials of system administration, whether in practical application of a data center or in the design of new systems and data centers. - Covers data center planning and design - Discusses configuration management - Illustrates business modeling and system administration -

Diff in June Jan 28 2020 "Diff in June" tells a day in the life of a personal computer, written by itself in its own language, as a sort of private log or intimate diary focused on every single change to the data on its hard disk. Using a small custom script, for the entire month of June 2011 Martin Howse registered each chunk of data which had changed within the file system from the previous day's image. Excluding binary data, one day's sedimentation has been published in this book, a novel of data archaeology in progress tracking the overt and the covert, merging the legal and illegal, personal and administrative, source code and frozen systematics. Martin Howse (London 1969 - www.1010.co.uk) is a programmer, writer, performer and explorer. He is a co-founder of micro-research, a mobile platform for psychogeophysical research with ongoing projects in Berlin, London, Suffolk and Peenemuende. Over the last ten years he has workshopped, performed, lectured and exhibited worldwide.
